DESCRIPTION: *Germanium; Solutions; *Organic
acids; Polarographic analysis; Reduction.

An investigation was made of the polarographic reduction of tetraivalent germanium in a solution of complexant organic acids. The results show that the reduction of tetraivalent germanium in a solution of complexant organic acids is a reversible process. The rate of reduction is a function of the concentration of the complexant organic acids and the concentration of the tetraivalent germanium. The results show that the reduction of tetraivalent germanium in a solution of complexant organic acids is a reversible process. The rate of reduction is a function of the concentration of the complexant organic acids and the concentration of the tetraivalent germanium.
